vLinux How-to for On-campus Personal Laptop or Home Use

Step 1. Download the NoMachine Enterprise Client for your platform (toward the bottom of the page):

https://www.nomachine.com/download-enterprise

Step 2. Install the NoMachine Enterprise Client:

Step 3. Configure the NoMachine Enterprise Client

Click on the **New** button:
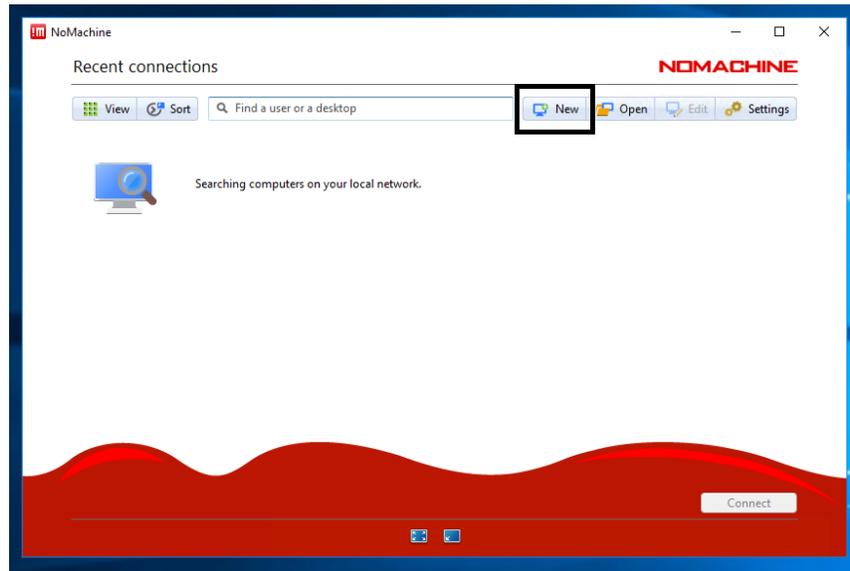

Select SSH from the **Protocol** drop-down list and click **Continue:**
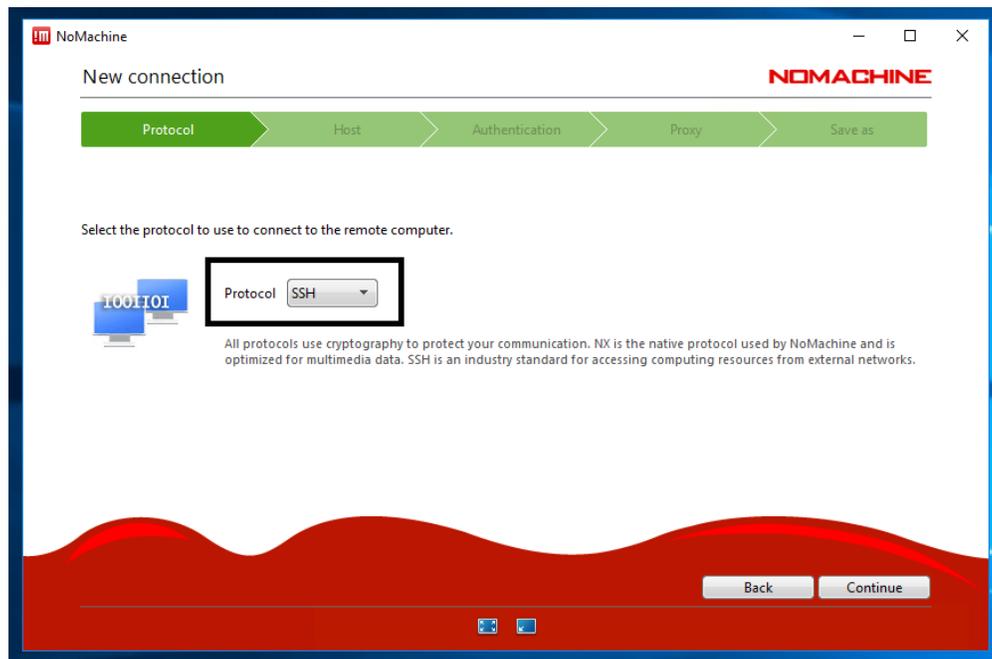

Enter vlinux.humboldt.edu as the **Host** and click **Continue**
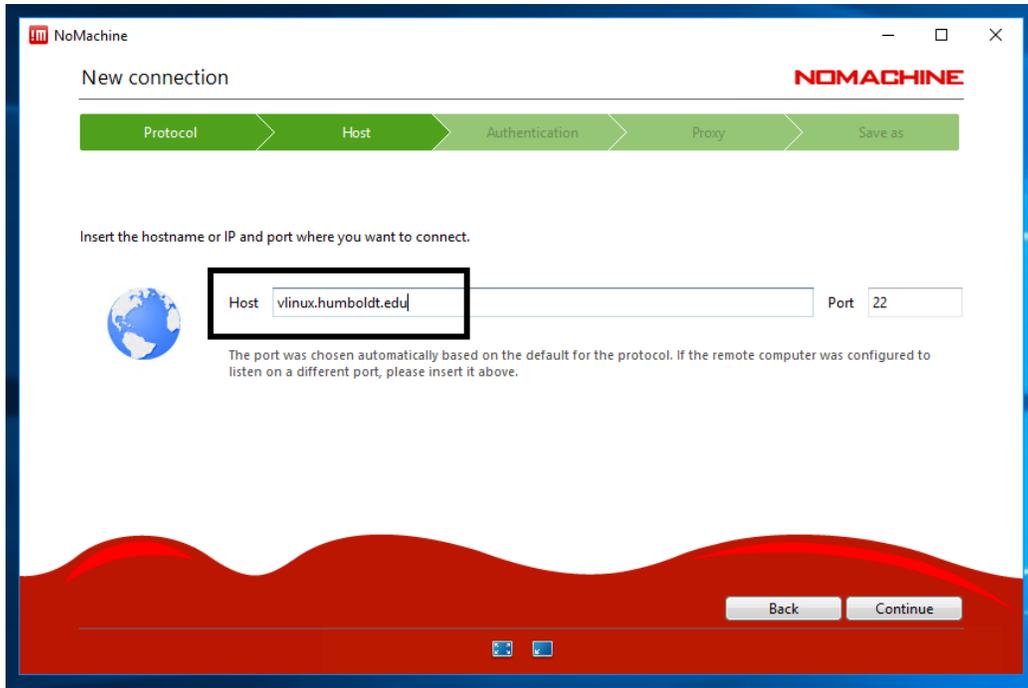

Choose **Password** as your authentication method and click **Continue**:
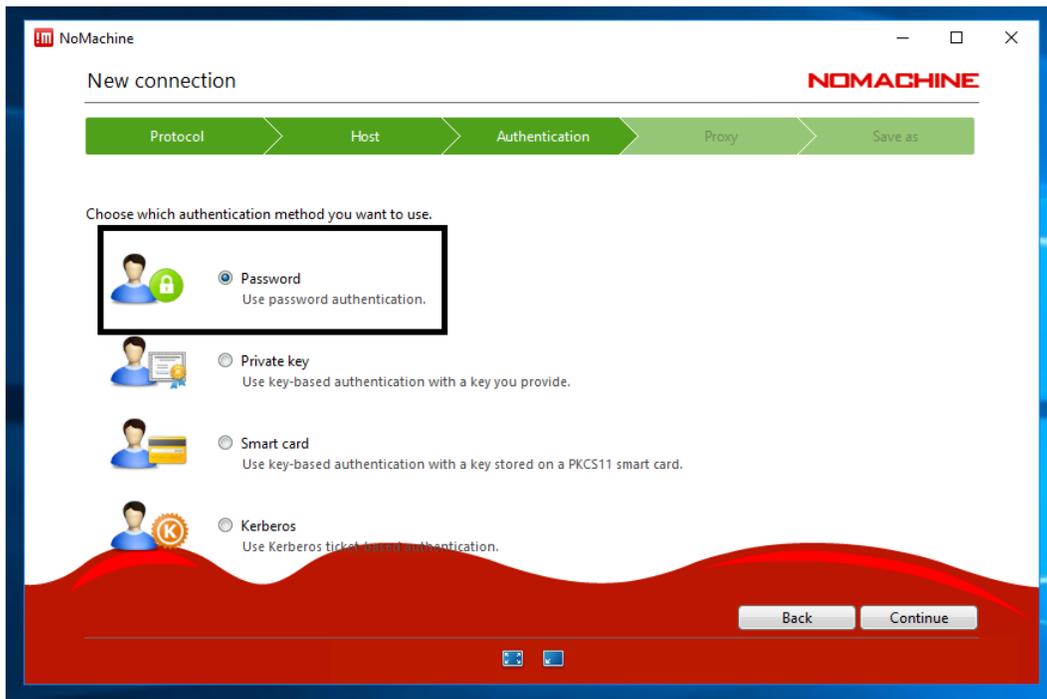

Choose **Don't use a proxy** for your network connection and click **Continue**:
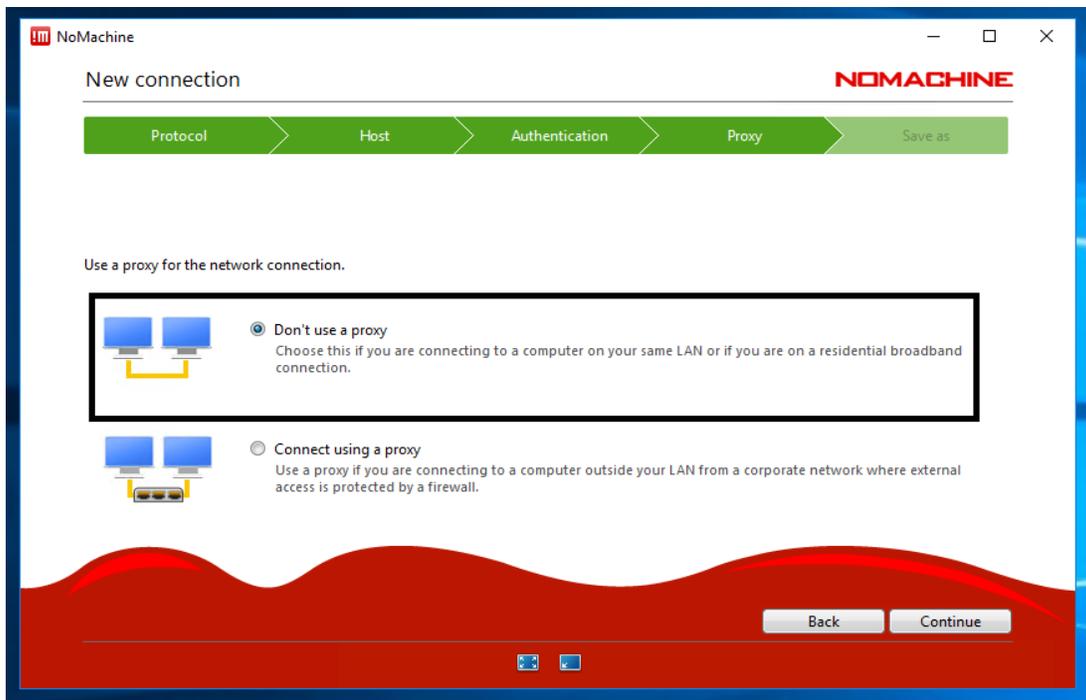

Enter a name for your connection and click the checkbox if you want to create a desktop shortcut to the NoMachine Enterprise Client. Click **Done**.
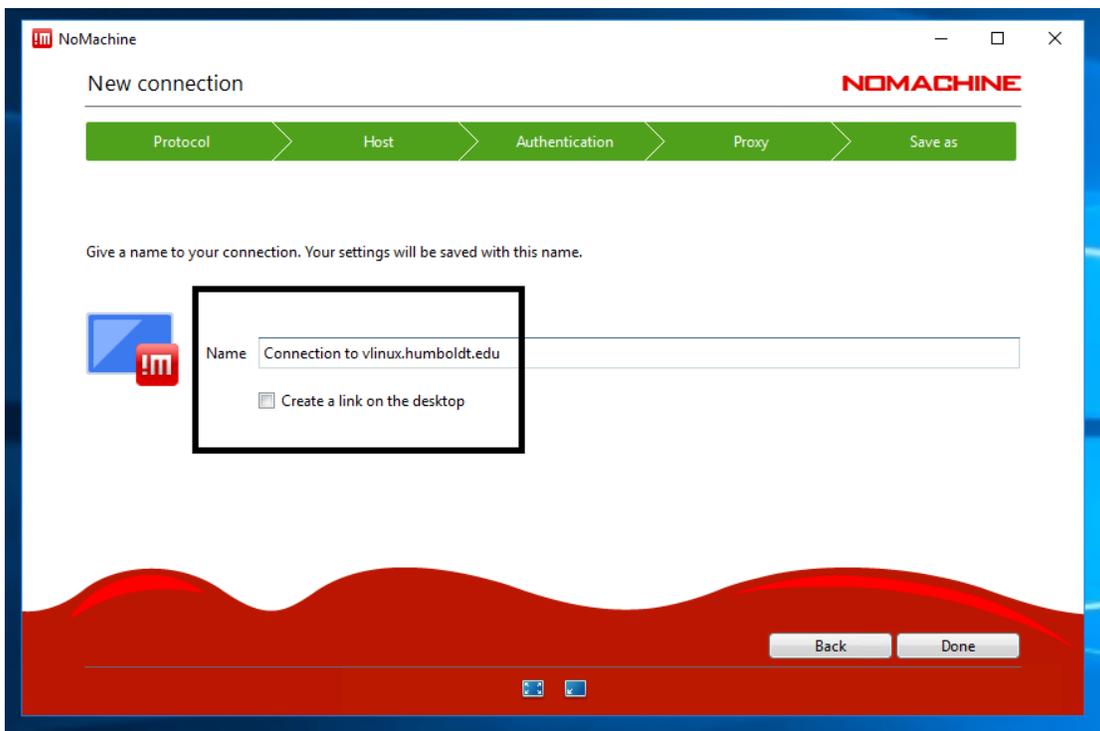

Select your connection and click **Connect**:
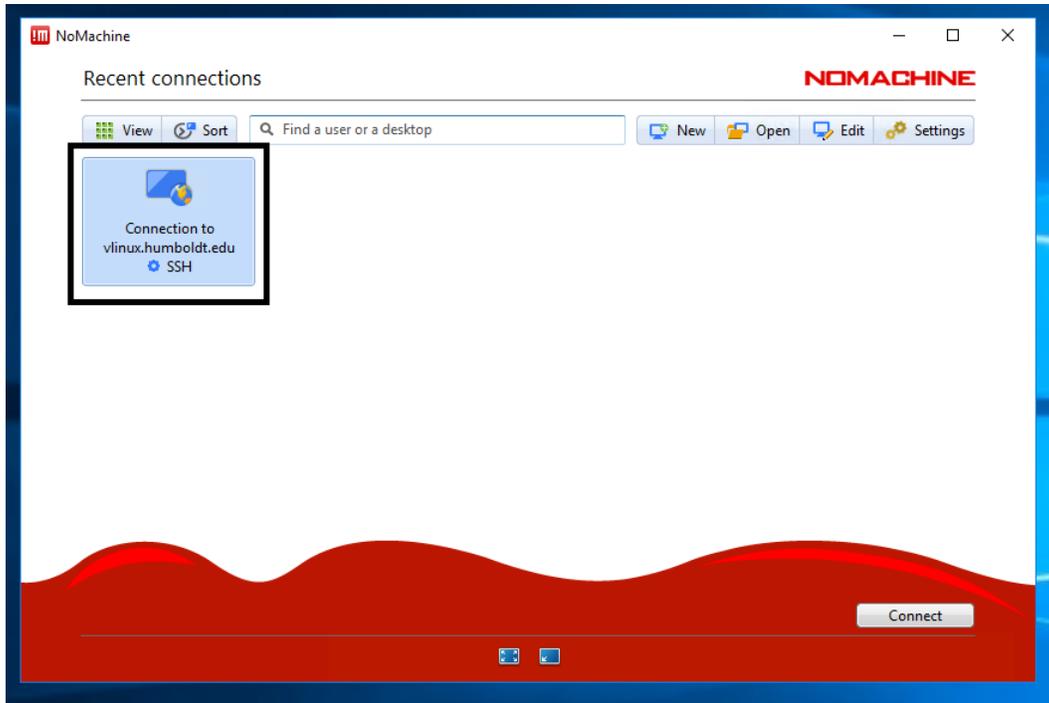

Click **Yes** to accept the RSA host key after verifying the host's authenticity:
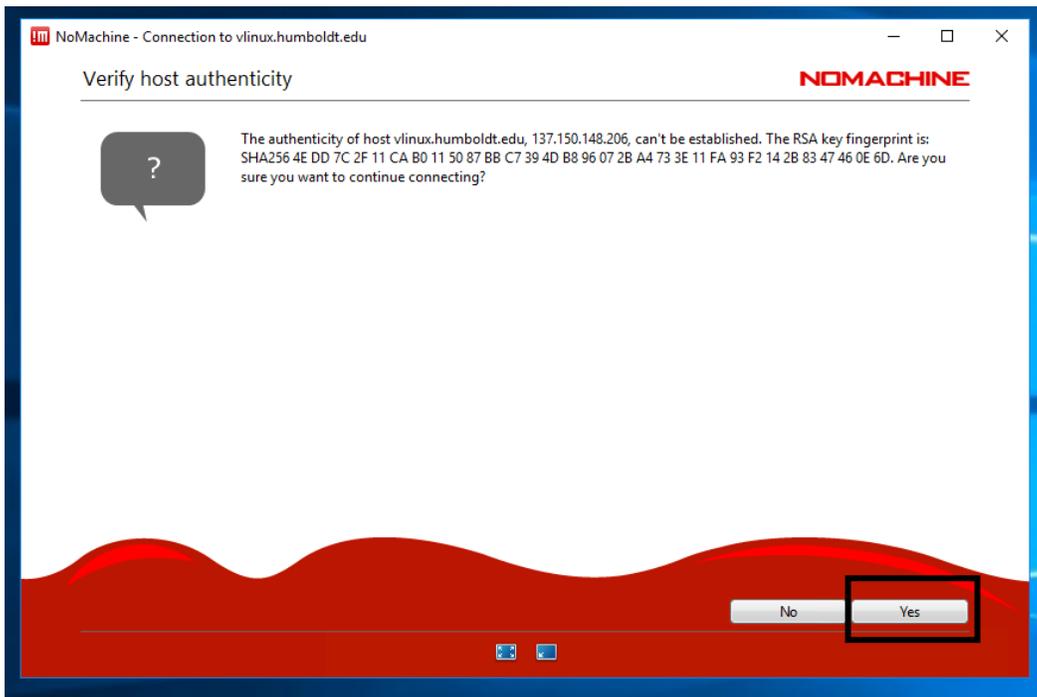

Now enter your HSU Username and Password and click OK
(only check **Save this password in the connection file** if you are on a trusted computer):
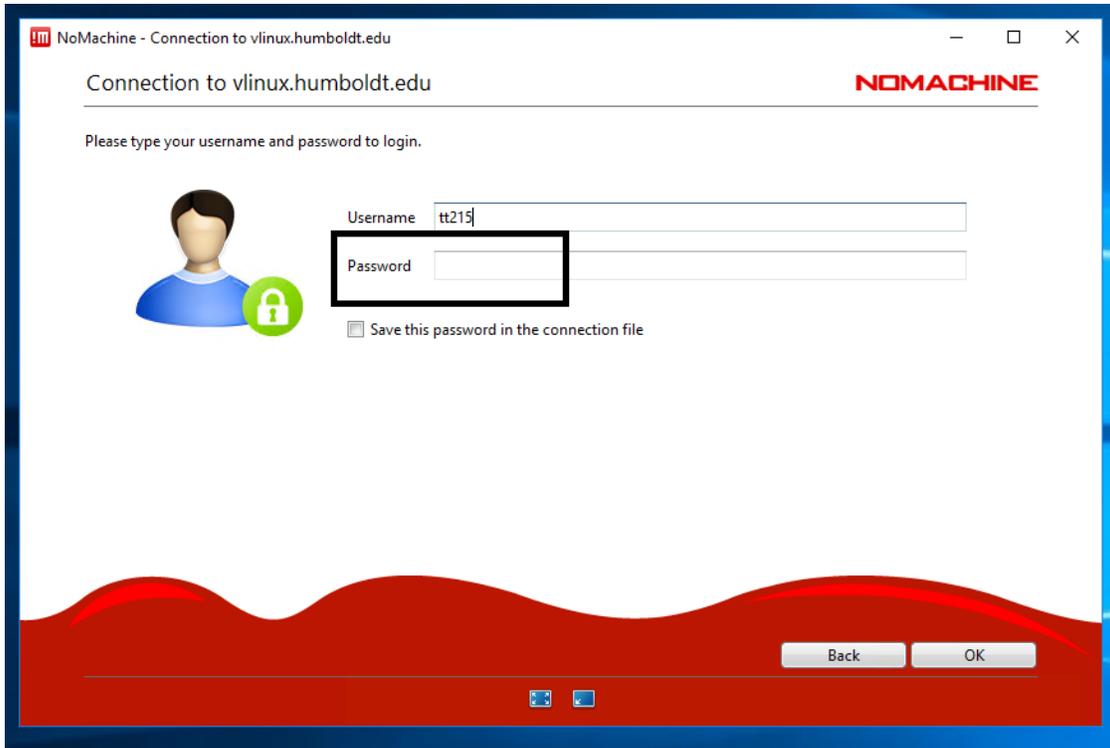

Review menu options and make any appropriate changes to the screen settings; we recommend unchecking
Change the server resolution to match the client when I connect or clicking on **Resize Remote Screen**
(second option from left) for the best experience. Click **OK**:
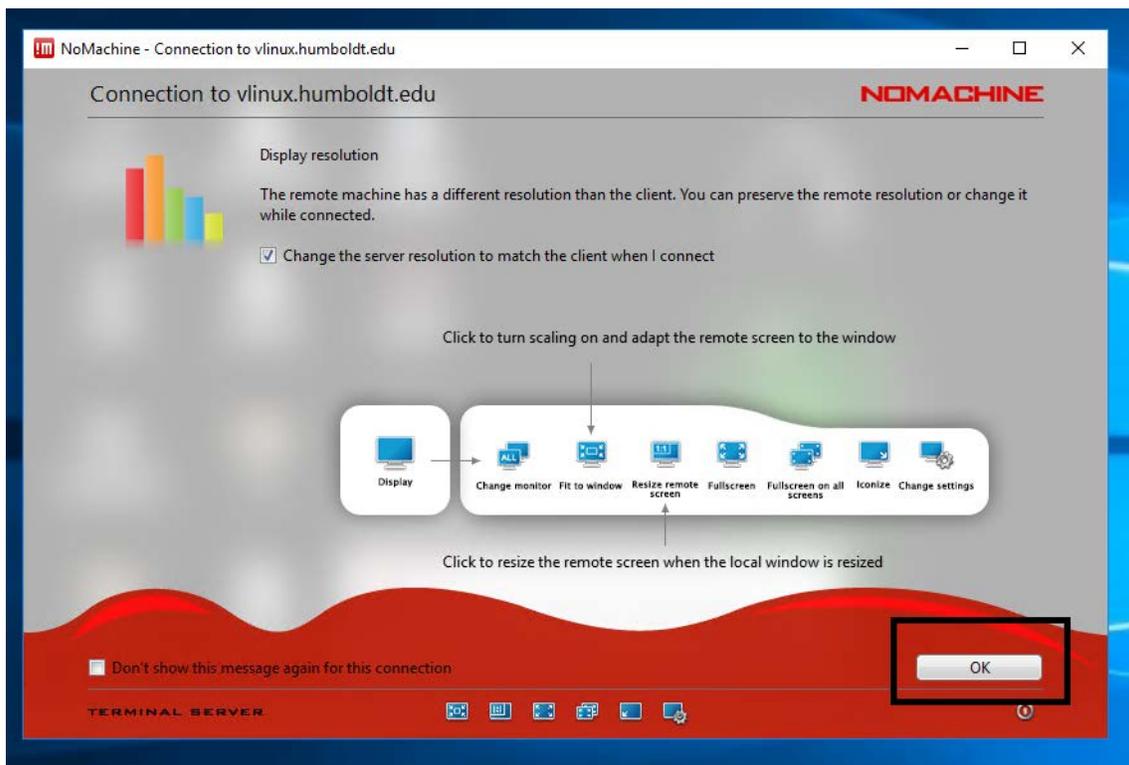

If you notice scrollbars after logging on to vLinux, click on the top right corner of the NoMachine window to return to the menu options:
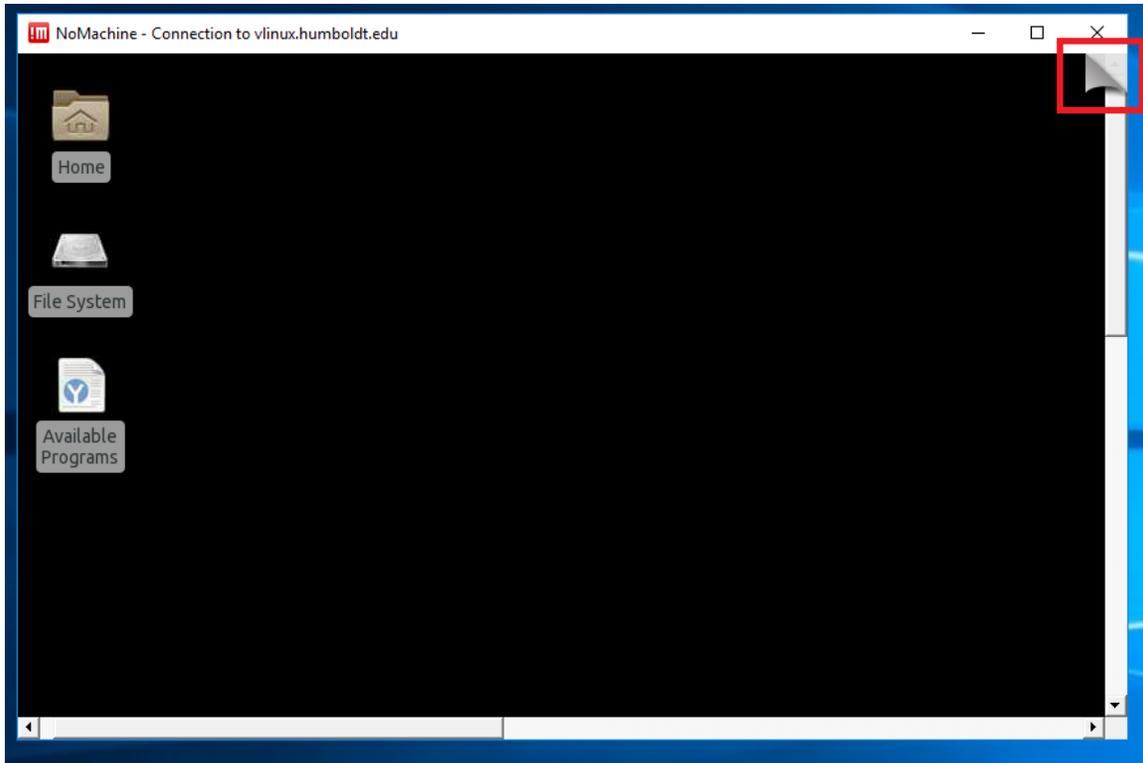

Click on the second option from the left.
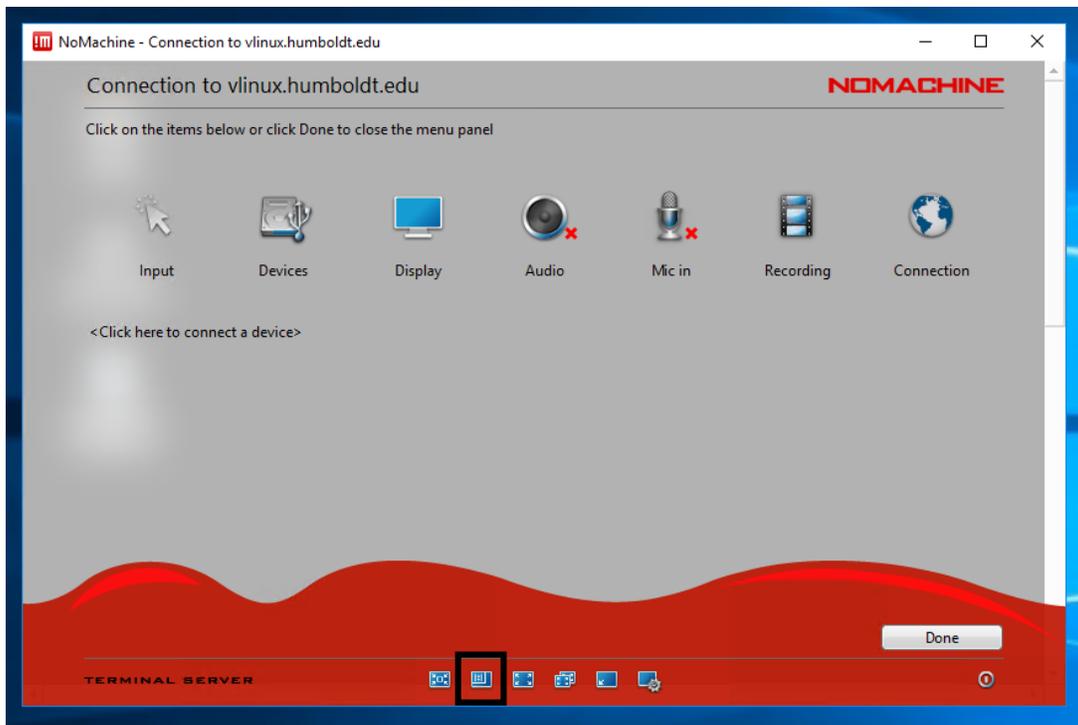

You should now be able to resize your NoMachine window and the vLinux desktop will adjust its size automatically.
